

INFOSEC POLICY

- Employees should have separate work and personal email IDs. Under any circumstances, both these accounts should not be merged. All the employees are strictly monitored on restricted installations and websites.
- The security patched and the OS must always be updated. The anti-virus and anti-malware software are also to be updated.
- All the suspicious pop-ups, sudden appearance of new programs or applications on the device, slow down of your system, new extensions in the browser, loss of control of mouse or keyboard, etc., must be immediately reported to the IT team at socteam@venturesoft.ai.
- Employees are advised not to use universal passwords to save the system from any kind of vulnerabilities and make a point to regularly change the device and account passwords for security reasons. Also, never write your passwords down and avoid unknown entries to your system.
- Employees have to use the devices provided by the organization and are not allowed to use their personal devices for official purposes.
- Employees are advised to log-off or lock the computer screen when not in use and ensure to use a password protected screensaver.
- All the employees should maintain a clear screen and a clear desk.
- All the physical documents that contain sensitive information must be password protected.
- Never open an email attachment that is received from an unknown sender.
- Removable media is another way in which the device can be at risk. USB devices may contain malware that may infect the device.
- The policy is applicable to all the locations of VentureSoft.

ACCEPTABLE USE POLICY

- **Protect Company Assets:** All employees must safeguard company assets (laptops, software, IDs, data) and use systems only for official purposes.
- **Handle Confidential Information Safely:** Do not send confidential data outside the organization unless approved by the asset owner for a valid business need.
- **Secure Your Workspace:** Always lock or log off systems when away and secure sensitive hard-copy documents before leaving for the day.
- **Password Safety:** Never share passwords, write them down openly, or leave your system unattended. Follow strong password rules and update them regularly.
- **No Unauthorized Devices:** Do not allow visitors or external parties to connect personal devices to the company network.
- **Internet & Email Usage:** Use internet, intranet, and email strictly for business purposes. Avoid using public email or messaging apps for work communication.
- **Software & Downloads:** Only IT is authorized to install software. Employees must not download or install unapproved tools or apps.
- **Report Security Incidents Immediately:** If you suspect malware, unusual activity, or device loss, stop using the device and report to your Manager/IT immediately.

- **Safe Use of Hardware & Mobile Devices:** Handle devices carefully, avoid insecure networks, and ensure no sensitive information is visible in public settings.
- **Data Storage & Backup:** Business data must be stored on approved network drives so that proper backup is maintained. Remote workers must back up data regularly.
